the mac user s guide to mass storage version 3 0 updated june 26 2025 this book demystifies mac storage from mechanical hard drives to solid state disks and covering topics such as network attached storage nas cloud storage repairing and managing disks encryption filesystems like apfs and managing data it also covers using external storage on an iphone or ipad as the amount of data we store continues to grow figuring out where to put it and how to access it becomes

more complicated it's not just that we need to find space for our increasingly large collections of photos, videos, music, and apps; we want it to be available whenever we need it and be sure that it's safe from hackers and thieves. Every Mac includes internal storage in the form of a hard drive, SSD, or Fusion Drive, but you may also have one or more external devices such as hard drives, flash drives, SD cards, or RAID devices, not to mention network-attached storage (NAS) devices or cloud storage like Dropbox or iCloud Drive. Making sense of all your options, managing your stored data, choosing new devices or services when you're running out of space, or even just figuring out what's where can drive anyone to distraction. Fortunately, Jeff Carlson has a book with all the answers. After decades of working with Macs and accumulating massive collections of photos and videos, Jeff has pulled together a wide-ranging book about Mac storage that contains just the help you're looking for among many other topics. This book covers how to choose a new hard drive, SSD, or hybrid drive; determining how much storage space you need; what you need to know about APFS, Apple's new filesystem; how to use APFS snapshots, aka Time Machine local snapshots; formatting and partitioning disks using Disk Utility; how to repair a misbehaving disk; RAID's what they are and how different types compare; how to tell when a hard drive is about to fail and what to do about it; what to do with a hard drive when it has outlived its usefulness; when to use a flash drive or SD card; how to create and use disk images; deciding among local, network, and cloud storage for various types of files; what a personal cloud is and why you might consider using one; strategies for freeing up extra disk space. The expanded third edition brings the book up to date with macOS 15 Sequoia. It also now covers using external storage with an iPhone or iPad, including how to format external disks, Thunderbolt 5, more ways to free up disk space, NAS devices get special coverage, including why you might want a NAS, how to choose a NAS, and when it's a better idea than an external hard drive; using a NAS with your Mac for a wide variety of purposes; special considerations when using a NAS for digital photos. Jeff also digs into details about numerous storage-related technologies: how to tell whether your third-party SSD needs to have TRIM enabled and what to do if the answer is yes; how to create a software RAID using Disk Utility or SoftRAID; what you need to know about filesystems and how to choose among APFS, Mac OS Extended (HFS+), and exFAT; why and how to encrypt a disk using FileVault or the Finder using iCloud Drive's optimized Mac storage feature. If you've ever been stumped at the difference between a volume and a partition, need help figuring out whether to buy a big external hard drive or a NAS for extra storage, or want to make sense of Apple's APFS filesystem, this book will tell you what you need to know.
